25 Years of Manufacturing Excellence

Simplicity Plus Hard & Soft Addressable Fire Alarm System

Simplicity Plus

Addressble Fire Alarm System

Simplicity

Noun

- the quality or condition of being easy to understand or do
 - the quality or condition of being uncomplicated in form or design
 - (count noun) a thing that is uncomplicated

Phrases

- be simplicity itself
- be extremely easy: programming this system is simplicity itself

The Simplicity Plus is the ideal introduction to the world of addressable fire alarm panels.

As its name suggests, it has been designed with ease of use in mind, using pre-programmed values for its programming options. The installer simply needs to configure the loop and enter text labels via the built in keypad (optional).

The Simplicity Plus has user definable zones, option for zonal or common alarm operation, options for I/O operation, alarm verification and user selectable languages.

It can be connected to an RS232 desktop printer for real time event log printing (Epson LQ300+ recommended) and it can also drive a serial repeater model AD-REP/M (Part No. 37-157).

Nuisance Alarms Filter - Alarm Verification

To help prevent false alarm causing a full evacuation, any smoke detector can be set to alarm verification mode with a time delay of between 30 seconds and 3 minutes 45 seconds. Should any of these detectors go into alarm then only the detector's LEDs and sound/flasher base (if connected) will activate. Should the alarm not be cleared with this time delay then a common alarm will occur.

Standards

The Simplicity Plus fire alarm control panel has been designed to meet the full requirements of EN54 part 2 and EN54 part 4.

Cable Break Protection

In the event of a cable break, the panel will report the break. The devices after the break will be lost, but will be listed one-by-one on the panel display to help locate the break.

Installation & Commissioning

In addition to the benefits already listed, once the panel has been connected a 'Device Count Verification' feature will confirm the number and type of every device. This can then be checked against the system specification.

System Monitoring

Since every device is monitored constantly and communicates with the panel at a maximum interval of 4 seconds, any malfunction in any device will be reported by the panel. This of course will include the exact location of the device.

Features

- ✓ One or Two loop addressable fire alarm panel (64, 126 or 252 device capacity)
- ✓ Certified to EN54 parts 2 & 4
- √ User definable zones
- ✓ Option for zonal or common alarm operation
- ✓ Options for I/O operation
- √ Alarm verification (help prevent false alarms)
- ✓ User selectable languages
- ✓ Set of changeover relay contacts for fault condition
- ✓ Set of changeover relay contacts for fire
- √ 2,048 event log (fire & fault)
- ✓ Zone or device disablement
- ✓ One man test mode
- ✓ Plug & play, no need for any special tools or laptop for commissioning
- √ Fully integrated keypad
- √ All associated devices are loop powered

All devices are assigned to a specific zone based on their address. This removes a programming step and helps to streamline the commissioning process. The following table outlines which addresses fall in which zones.

Loop & Address	SP-252/M	
1: Address 1 - 32	Zone 1	
1: Address 33 - 64	Zone 2	
1: Address 65 - 96	Zone 3	
1: Address 97 - 126	Zone 4	
2: Address 1 - 32	Zone 5	
2: Address 33 - 64	Zone 6	
2: Address 65 - 96	Zone 7	
2: Address 97 - 126	Zone 8	

Soft Addressing

Zeta Alarm Watch

PC.

The MkII Handheld Programmer (MKII-TOOL) is designed to compliment all MkII devices and to assist the comissioning engineer on site.

Smoke and heat detectors can be tested when plugged on the programmer and alarm LED's can be verified prior to installation.

Using the Zeta alarm watch software, multiple panels

can be monitored from a central PC. The panels can be grouped by company to give a structured display on the

The unit will softly address all devices without using the incorporated dip-switch on the field devices.

The MkII Programmer can re-program the opto-heat detectors to either heat or smoke detector.

The Simplicity panel can transmit the following information

- ✓ Device alarm (including loop & address information)
- ✓ Device fault (including loop & address information)
- ✓ Panel reset
- √ Loop reconfigured
- ✓ Loop wiring fault
- ✓ Power supply fault
- ✓ Earth fault
- √ Clock reset
- ✓ Evacuation started

Features

- √ Addressable repeater panel (display only, no controls)
- √ Complies fully to EN54 parts 2 & 4

Model	AD-REP/M
Part No.	37-157
Supply Voltage	20 - 30 V DC
System Voltage	29V DC (Nominal)
Connections	Supply + ,Supply -, Data +, Data -
Operating Temperature	-0°C to 50°C
Enclosure Size (mm)	(W) 375 x (H) 335 x (D) 75mm
Weight	1 KG
